ProjectPAK is designed for the custom manufacturer or job shop that wants to improve their bidding efficiency. Built with powerful database technology, ProjectPAK speeds estimating by making it easy to reuse common components and prior work. It gives you total control over defining and setting up underlying items, organizing estimate layout, and generating custom documents. Whether you're doing a quick bid, or estimating a multi-million dollar job, ProjectPAK will have you producing quotations up to 10 times faster than you can today.

Flexible

Handles all estimating styles including unit measurement (lineal feet, square feet, etc.), item composition (items are broken down into underlying material, labor, etc.), and parametric (mathematical formulas that define relationships between a product and its underlying parts). Enter information manually, or quickly drop reusable library items and pre-packaged assemblies on to the estimate sheet. Customizable document templates let you create proposals to your exact specifications. Formula builder lets you modify standard estimate sheet calculations so they address custom estimating needs.

Precise

Automatically calculates detail and summary values. Built-in error checking pinpoints missing takeoff quantities. User defined precision up to 5 decimal places. Analysis reports show cost, overhead and profit margins, taxable and non-taxable amounts, as well as, cost and quantity breakdowns by product, location, phase, etc. Library Item Price Book ensures accurate and up to date costs. Assemblies always use current library costs and values.

MORE THAN JUST ESTIMATING

ProjectPAK is a comprehensive job management system that includes:

- Customer, vendor, and contact databases
- Notes and reminders
- Job details
- Built-in document and report generator
- Purchasing and invoicing
- Import and export utility

TradeSoft INC

ProjectPAK®

ESTIMATING SO POWERFUL
it gives you a competitive edge.

"ProjectPAK is a big improvement over our old system. It has certainly standardized the process. In the first six months, I've seen an improvement to our bottom line equal to 10 times my investment in ProjectPAK."

Tony Hanslin
Yankee Barn Homes

"ProjectPAK is so flexible and easy to use, we've molded it into our system so it fits like a glove."

Richard Swartz
Sign Concepts, Inc.

"ProjectPAK saved us from hiring another person. We create an estimate in half the time as we used to and the documents we produce create a professional image."

Sharon Bollock
Bollock Industries

"ProjectPAK is the greatest thing since sliced peaches. It drives our entire business: Proposals, production reports, job orders, shipping tickets, installation tickets, and purchasing."

Frank Vecera
Harney Woodworking, Ltd.

Consistent

Document templates standardize document content and layout. Product assemblies standardize product cost and configuration. Security prevents unauthorized changes to the database. The shared database ensures up to date and accurate costs across all networked users. Moreover, since ProjectPAK uses a point and click interface, data entry errors are significantly reduced.

Fast

Copy reusable items from the library and from the assembly catalog into your estimate sheet. This eliminates typing the same thing over and over again. Copy, cut, and paste items within an estimate or between estimates. Change material type and species with a click of the mouse and instantly see cost differences. Automatically generate reports and professional looking budgets, quotations, revisions, and change orders with built in document generator. This eliminates the time consuming chore of typing quotations in a word processor.

Easy

Intuitive design and layout make ProjectPAK easy to use and learn. Comes with a comprehensive user's guide, tutorial, examples booklet, and context sensitive help. Sample databases are loaded with examples to help you get started. Knowledgeable and friendly technical support is always just a phone call away. In fact, customers consistently rate our support staff as far superior to anything they've experienced with other software vendors.

Choose a single user package or a network version that supports multiple concurrent users.
